Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Monica is interested in finding a treasure but the key to opening is to get the sum of the main diagonal elements and secondary diagonal elements.

Write a program to help Monica find the diagonal sum of a square 2D array.

Note: The main diagonal of the array consists of the elements traversing from the top-left corner to the bottom-right corner. The secondary diagonal includes elements from the top-right corner to the bottom-left corner.

Input Format

The first line of input consists of an integer N, representing the number of rows and columns.

The following N lines consist of N space-separated integers, representing the 2D array elements.

Output Format

The first line of output prints "Sum of the main diagonal: " followed by an integer, representing the sum of the main diagonal.

The second line prints "Sum of the secondary diagonal: " followed by an integer, representing the sum of the secondary diagonal.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3
1 2 3
4 5 6
7 8 9

Output: Sum of the main diagonal: 15
Sum of the secondary diagonal: 15

Answer

```
// You are using Java
import java.util.Scanner;
public class Main{
    public static void main(String[] args){
        Scanner myobj = new Scanner(System.in);
        int rows=myobj.nextInt();
        int cols= rows;
        int [][] mat = new int[rows][cols];
        int main_d=0;
        int sec_d=0;
        for(int i=0;i<rows;i++){
            for(int j=0;j<cols;j++){
                mat[i][j]=myobj.nextInt();
                if(i==j){
                    main_d+=mat[i][j];
                }
                if((i+j)==(rows-1)){
                    sec_d+=mat[i][j];
```

```
            }

        }
    }

    //int sec_d=mat[0][2]sat[1][1]+mat[2][0];
    System.out.println("Sum of the main diagonal: "+main_d);
    System.out.println("Sum of the secondary diagonal: "+sec_d);
  }
}
```

Status : Correct **Marks : 10/10**
