2028_REC_OOPS using Java_Week 12_Q2

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Alex is learning about Java's functional interfaces and lambda expressions.

He wants to write a simple program that prints the square of each number in an array using a predefined functional interface.

Help Alex complete this task using the Consumer functional interface.

Input Format

- The first line contains an integer N, the number of elements in the array.
- The second line contains N space-separated integers.

Output Format

- Print the squares of all elements in the array, separated by a space.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 4

1 2 3 4

Output: 1 4 9 16

Answer

// You are using Java

```
import java.util.*;
```

```
interface square{
```

```
    void calc(int []arr);
```

```
}
```

```
public class Main{
```

```
    public static void main(String []args){
```

```
        Scanner sc =new Scanner (System.in);
```

```
        int n=sc.nextInt();
```

```
        int[] arr=new int[n];
```

```
        for(int i=0;i<n;i++){
```

```
            arr[i]=sc.nextInt();
```

```
        }
```

```
        square s=(arr_func) ->{ // here separate func sp diff name
```

```
            for(int j=0;j<n;j++){
```

```
                int m=(int) Math.pow(arr_func[j],2);
```

```
                System.out.print(m + " ");
```

```
            }
```

```
        };
```

```
        s.calc(arr); //function calling use same name used
```

```
    }
```

```
}
```

Status : Correct

Marks : 10/10
