## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 10\_Q3

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : COD**

##### **1. Problem Statement**

Priya is analyzing encrypted messages in a research project. She wants to analyze the frequency of each character in a given paragraph. The characters should be stored in a TreeMap so that the output is sorted in ascending order of characters automatically.

You are required to build a Java program that:

Uses a TreeMap<Character, Integer> to count how many times each character appears in the message. Ignores spaces and considers only alphabets (case-sensitive). Outputs the frequencies of characters in sorted order.

You must use a TreeMap in the class named MessageAnalyzer.

***Input Format***

The first line of input contains an integer  $n$ , the number of lines in the message.

The next  $n$  lines each contain a string (the encrypted message line).

### ***Output Format***

The first line of output prints: "Character Frequency:"

Then print each character and its frequency in the format: "<character>: <count>"

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 2  
Hello World  
Java

Output: Character Frequency:

H: 1  
J: 1  
W: 1  
a: 2  
d: 1  
e: 1  
l: 3  
o: 2  
r: 1  
v: 1

### ***Answer***

```
// You are using Java
import java.util.*;

class Main{
    public static void main(String[] args){
        Scanner sc =new Scanner(System.in);
        TreeMap<Character,Integer> map = new TreeMap<>();
        int n =sc.nextInt();
        sc.nextLine();
        int count=0;
        System.out.println("Character Frequency:");
        for (int i = 0; i < n; i++) {
            String s = sc.nextLine();
            for (int j = 0; j < s.length(); j++) {
                char c = s.charAt(j);
                if (map.containsKey(c)) {
                    map.put(c, map.get(c) + 1);
                } else {
                    map.put(c, 1);
                }
            }
        }
        for (Map.Entry<Character, Integer> entry : map.entrySet()) {
            System.out.println(entry.getKey() + ":" + entry.getValue());
        }
    }
}
```

```
String a="";
for(int i=0;i<n;i++){
    String b=sc.nextLine().trim();
    a+=b;
}

char []letters=a.toCharArray();

for(int j=0;j<letters.length;j++){
    count=0;

    for(int k=0;k<letters.length;k++){
        if(letters[j]==letters[k]){
            count+=1;
        }
        map.put(letters[j],count);
    }
    //if(letters[j]!=' '){
    //    System.out.println(a.get(j)+" "+a.getValue());
    //}
}
}

for(var c:map.entrySet()){
    if(c.getKey()!=' ')
        System.out.println(c.getKey()+" "+c.getValue());
}
}
```

**Status : Correct**

**Marks : 10/10**
