## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 8\_Q1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Write a program to validate the email address and display suitable exceptions if there is any mistake.

Create 3 custom exception classes as below

DotExceptionAtTheRateExceptionDomainException

A typical email address should have a ". " character, and a "@" character, and also the domain name should be valid. Valid domain names for practice be 'in', 'com', 'net', or 'biz'.

Display Invalid Dot usage, Invalid @ usage, or Invalid Domain message based on email id.

Get the email address from the user, validate the email by checking the

above-mentioned criteria, and print the validity status of the input email address.

#### ***Input Format***

The first line of input contains the email to be validated.

#### ***Output Format***

The output prints a Valid email address or an Invalid email address along with the suitable exception

If email ends with . or contains not exactly one . after @, it throws:

DotException: Invalid Dot usage

Invalid email address

If @ appears not exactly once, it throws:

AtTheRateException: Invalid @ usage

Invalid email address

If the part after the last dot is not among accepted domains:

DomainException: Invalid Domain

Invalid email address

If all conditions satisfied then print:

Valid email address

Refer to the sample input and output for format specifications.

### **Sample Test Case**

Input: sample@gmail.com

Output: Valid email address

### **Answer**

```
// You are using Java
import java.util.Scanner;

class DotException extends Exception {
    public DotException(String message) {
        super(message);
    }
}

class AtTheRateException extends Exception {
    public AtTheRateException(String message) {
        super(message);
    }
}

class DomainException extends Exception {
    public DomainException(String message) {
        super(message);
    }
}

public class Main {

    public static void validateEmail(String email) throws DotException,
AtTheRateException, DomainException {

        int atCount = 0;
        int atIndex = -1;
        for (int i = 0; i < email.length(); i++) {
            if (email.charAt(i) == '@') {
                atCount++;
                atIndex = i;
            }
        }
        if (atCount != 1) {
            throw new DotException("Email must have exactly one '@' symbol");
        }
        if (atIndex + 1 == email.length() || email.substring(atIndex + 1).contains(".")) {
            throw new AtTheRateException("Email must have a valid domain name");
        }
        String[] parts = email.split("@");
        if (parts[0].isEmpty() || parts[1].isEmpty()) {
            throw new DomainException("Email must have a valid local part and domain part");
        }
    }
}
```

```
        }
    }

    if (atCount != 1) {
        throw new AtTheRateException("Invalid @ usage");
    }

    if (email.startsWith("@") || email.startsWith(".") || email.endsWith("@") || email.endsWith(".")) {
        throw new DotException("Invalid Dot usage");
    }

    if (email.contains.."") || email.contains("@@") || email.contains(".@") || email.contains("@."))
        throw new DotException("Invalid Dot usage");
    }

    String domainPart = email.substring(atIndex + 1);

    if (!domainPart.contains(".")) {
        throw new DotException("Invalid Dot usage");
    }

    int lastDot = email.lastIndexOf('.');
    if (lastDot <= atIndex || lastDot == email.length() - 1) {
        throw new DotException("Invalid Dot usage");
    }

    String extension = email.substring(lastDot + 1);

    if (!(extension.equals("com") || extension.equals("in") || extension.equals("net") || extension.equals("biz")))) {
        throw new DomainException("Invalid Domain");
    }
}

public static void main(String[] args) {
    Scanner sc = new Scanner(System.in);
    String email = sc.nextLine().trim();

    try {
        validateEmail(email);
    }
}
```

```
        System.out.println("Valid email address");
    } catch (DotException e) {
        System.out.println("DotException: " + e.getMessage());
        System.out.println("Invalid email address");
    } catch (AtTheRateException e) {
        System.out.println("AtTheRateException: " + e.getMessage());
        System.out.println("Invalid email address");
    } catch (DomainException e) {
        System.out.println("DomainException: " + e.getMessage());
        System.out.println("Invalid email address");
    }

    sc.close();
}
}
```

**Status :** Correct

**Marks :** 10/10
